

Hands-on Lab: Monitoring a DAG

Estimated time needed: 20 minutes

Objectives

After completing this lab you will be able to:

- Search for a DAG.
- Pause/Unpause a DAG.
- Get the Details of a DAG.
- Explore grid view of a DAG.
- Explore graph view of a DAG.
- Explore Calendar view of a DAG.
- Explore Task Duration view of a DAG.
- Explore Details view of a DAG.
- View the source code of a DAG.
- Delete a DAG.

About Skills Network Cloud IDE

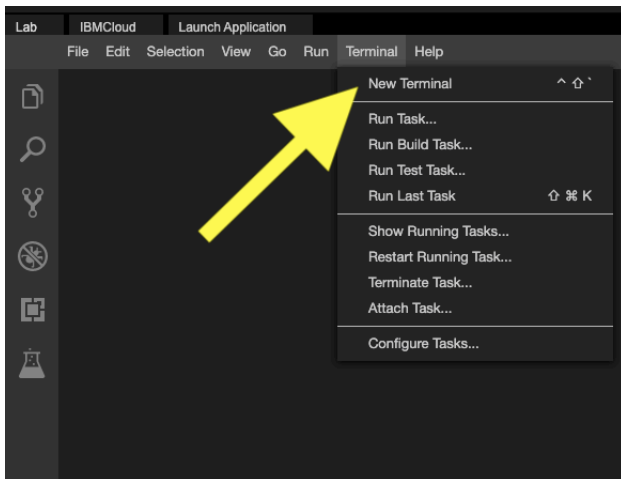

Skills Network Cloud IDE (based on Theia and Docker) provides an environment for hands on labs for course and project related labs. Theia is an open source IDE (Integrated Development Environment), that can be run on desktop or on the cloud. to complete this lab, we will be using the Cloud IDE based on Theia running in a Docker container.

Important Notice about this lab environment

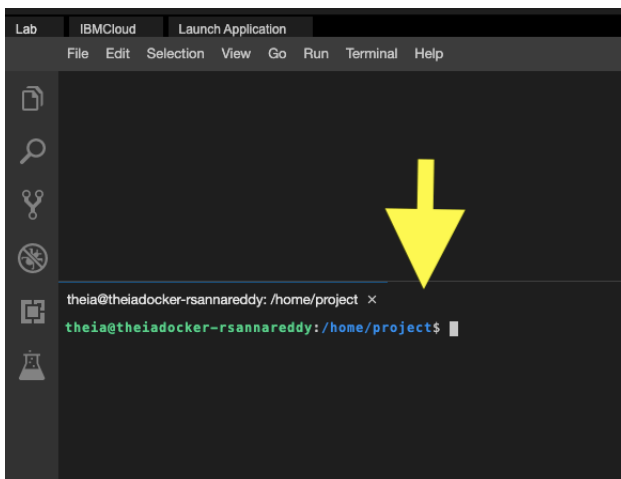

Please be aware that sessions for this lab environment are not persistent. A new environment is created for you every time you connect to this lab. Any data you may have saved in an earlier session will get lost. To avoid losing your data, please plan to complete these labs in a single session.

Exercise 1 - Getting the environment ready

Step 1.1. Open a new terminal by clicking on the menu bar and selecting **Terminal->New Terminal**, as shown in the image below.

This will open a new terminal at the bottom of the screen.

Run the commands below on the newly opened terminal. (You can copy the code by clicking on the little copy button on the bottom right of the codeblock below and then paste it, wherever you wish.)

Start Apache Airflow in the lab environment.

```
start_airflow
```

Please be patient, it will take a few minutes for airflow to get started.

When airflow starts successfully, you should see an output similar to the one below:

```
theia@theiadocker-rsannareddy:/home/project$ start-airflow
Starting your airflow services...
This process can take a few minutes.

Airflow started, waiting for all services to be ready...

Your airflow server is now ready to use and available with username: airflow password: MTM4ODUtcnNhbm5h

You can access your Airflow Webserver at: https://rsannareddy-8080.theiadocker-5-labs-prod-th-eiak8s-4-tor01.proxy.cognitiveclass.ai

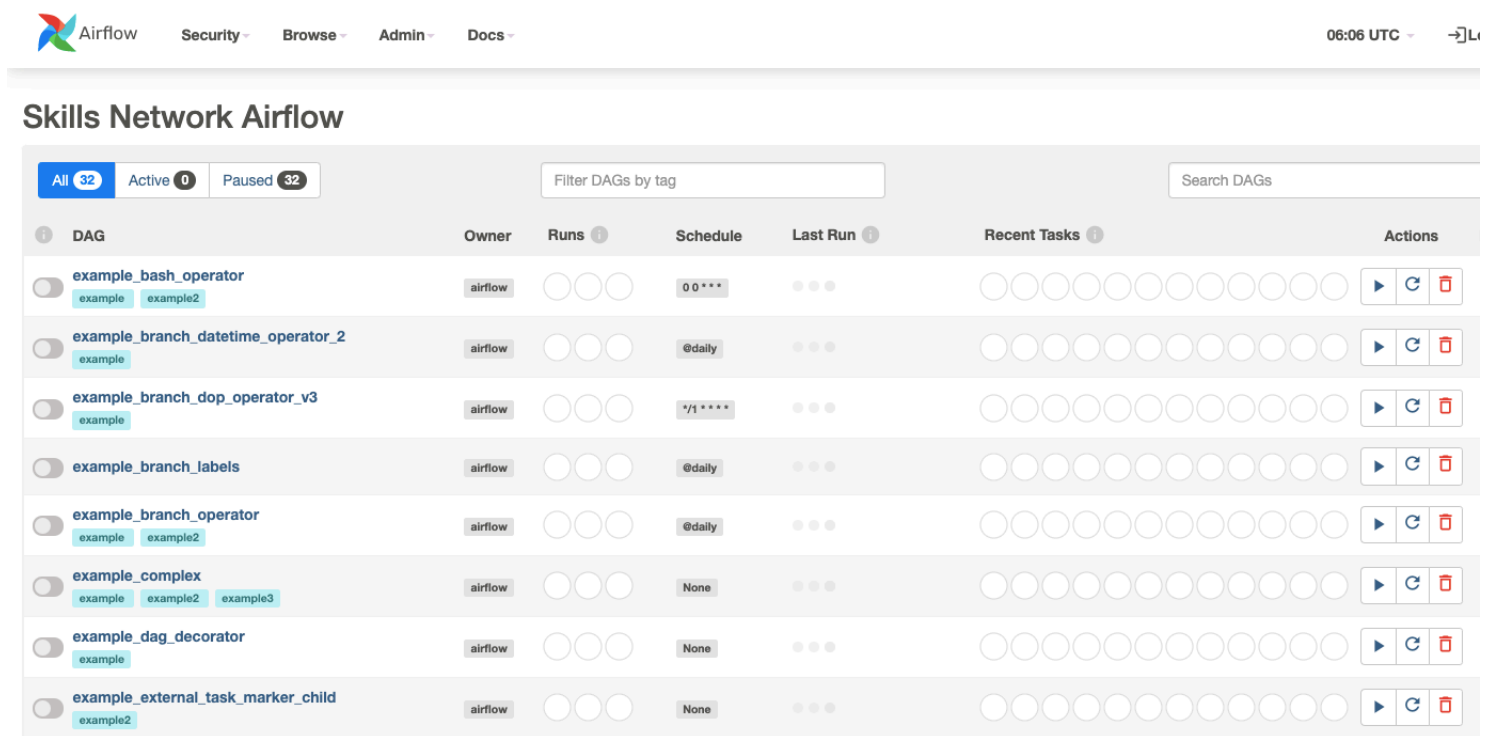

CommandLine:
• List DAGs: airflow dags list
• List Tasks: airflow tasks list example_branch_operator
• Run an example task: airflow tasks test example_branch_operator runme_1 2015-06-01
theia@theiadocker-rsannareddy:/home/project$
```

UI URL Username Password

Step 1.2. Open the Airflow Web UI

Copy the Web-UI URL and paste it on a new browser tab. Or you can click on the URL by holding the control key (Command key in case of a Mac).

You should land at a page that looks like this:

Exercise 2 - Submit a dummy DAG

For the purpose of monitoring, let's create a dummy DAG with three tasks.

Task1 does nothing but sleep for 1 second.

Task2 sleeps for 2 seconds.

Task3 sleeps for 3 seconds.

This DAG is scheduled to run every 1 minute.

Step 2.1. Using Menu->File->New File create a new file named dummy_dag.py.

Step 2.2. Copy and paste the code below into it and save the file.

```
# import the libraries
from datetime import timedelta
# The DAG object; we'll need this to instantiate a DAG
from airflow import DAG
# Operators; we need this to write tasks!
from airflow.operators.bash_operator import BashOperator
# This makes scheduling easy
from airflow.utils.dates import days_ago
#defining DAG arguments
# You can override them on a per-task basis during operator initialization
default_args = {
    'owner': 'Ramesh Sannareddy',
    'start_date': days_ago(0),
    'email': ['ramesh@somemail.com'],
    'email_on_failure': False,
    'email_on_retry': False,
    'retries': 1,
    'retry_delay': timedelta(minutes=5),
}
# defining the DAG
dag = DAG(
    'dummy_dag',
    default_args=default_args,
    description='My first DAG',
    schedule_interval=timedelta(minutes=1),
)
# define the tasks
# define the first task
task1 = BashOperator(
    task_id='task1',
    bash_command='sleep 1',
```

```

    dag=dag,
)
# define the second task
task2 = BashOperator(
    task_id='task2',
    bash_command='sleep 2',
    dag=dag,
)
# define the third task
task3 = BashOperator(
    task_id='task3',
    bash_command='sleep 3',
    dag=dag,
)
# task pipeline
task1 >> task2 >> task3

```

Submitting a DAG is as simple as copying the DAG python file into dags folder in the AIRFLOW_HOME directory.

Step 2.3. Open a terminal and run the command below to submit the DAG that was created in the previous exercise.

```
cp dummy_dag.py $AIRFLOW_HOME/dags
```

Step 2.4. Verify that our DAG actually got submitted.

Run the command below to list out all the existing DAGs.

```
airflow dags list
```

Verify that dummy_dag is a part of the output.

Step 2.5. Run the command below to list out all the tasks in dummy_dag.

```
airflow tasks list dummy_dag
```

You should see 3 tasks in the output.

Exercise 3 - Search for a DAG

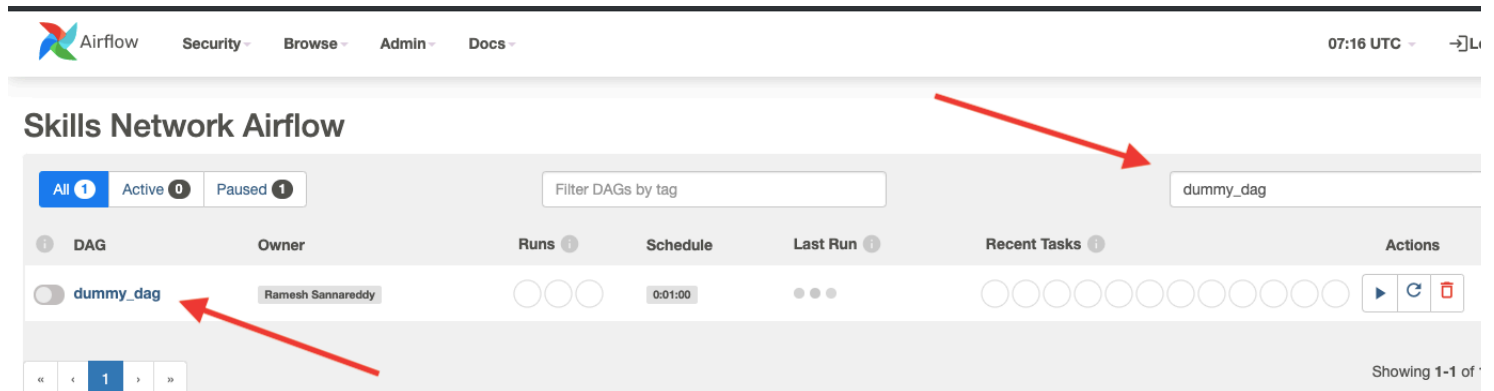

In the Web-UI, identify the Search DAGs text box as shown in the image below.

Type dummy_dag in the text box and press enter.

Note: It may take a couple of minutes for the dag to appear here. If you do not see your DAG, please give it a minute and try again.

You should see the dummy_dag listed as seen in the image below:

Exercise 4 - Pause/Unpause a DAG

Unpause the DAG using the Pause/Unpause button.

		Filter DAGs by tag		dummy_dag	
All 1	Active 1	Paused 0			
DAG	Owner	Runs 1	Schedule	Last Run 1	Recent Tasks 1
<input checked="" type="checkbox"/> dummy_dag	Ramesh Sannareddy	<input type="radio"/> <input checked="" type="radio"/> 9 <input type="radio"/>	0:01:00	2021-07-27, 00:08:00 1	<input checked="" type="radio"/> 8 <input checked="" type="radio"/> 4 <input type="radio"/> <input type="radio"/> <input type="radio"/> <input type="radio"/> <input type="radio"/> <input type="radio"/> <input type="radio"/> <input checked="" type="radio"/> 4 <input checked="" type="radio"/> 11 <input type="radio"/> <input type="radio"/> <input type="radio"/>

Showing 1-1 of 1

- Owner of the DAG
- How many times this DAG has run.
- Schedule of the DAG
- Last run time of the DAG
- Recent task status.

Click on the DAG name as shown in the image below to see the detailed view of the DAG.

The grids in the image below represent a single DAG run and the color indicates the status of the DAG run. Place your mouse on any grid to see the details.

The squares in the image below represent a single task within a DAG run and the color indicates its status. Place your mouse on any square to see the task details.

Exercise 7 - Explore graph view of DAG

- Click on the Graph View button to open the graph view.
- Click on the Auto Refresh button to switch on the auto refresh feature.
- The graph view shows the tasks in a form of a graph. With the auto refresh on, each task status is also indicated with the color code.

Exercise 8 - Calender view

The calender view gives you an overview of all the dates when this DAG was run along with its status as a color code.

Exercise 9 - Task Duration view

The Task Duration view gives you an overview of how much time each task took to execute, over a period of time.
